

ASLO 2017 : workshop programme arctique GEOTRACES

Lars Eric Heimburger, chercheur du MIO, a participé à ce workshop

The U.S., European and Canadian Arctic GEOTRACES cruises in 2015 offered a unique and quasi-synoptic view of the Arctic Ocean. Scientists from the U.S., Europe and Canada came together to kick off the ASLO Aquatic Sciences meeting in Honolulu, Hawai'i on 27 February 2017 to discuss the Arctic GEOTRACES programme. The workshop was a special chance for early career scientists to meet and discuss interdisciplinary research topics
